

Una mujer fallece pero consigue volver de la muerte. Lo que relata después conmociona al mundo...

El Ciudadano · 14 de noviembre de 2016

Hay testimonios que realmente te dejan sin habla, sobre todo cuando es algo que roza lo “sobrenatural”... Ha habido muchos relatos de personas que han experimentado muerte clínica, es decir, permanecer un determinado período de tiempo sin signos vitales, clínicamente muertas, pero que al poco después han conseguido volver, de una manera u otra, de esa etapa, admitiendo haber experimentado unas sensaciones increíbles. Obviamente, y como ocurre en todos los aspectos de la vida, hay muchas personas que reaccionan de forma escéptica frente a esto.

 Experiencias cercanas a la muerte

Sin profundizar en la materia de lo que consiguen experimentar dichas personas, sólo diremos que hay un amplio abanico de testimonios en los que se pueden apreciar muy distintas cosas. También

hay muchas personas que afirman que lo experimentado depende de las creencias de cada persona, pero, sin embargo, es un tema que muy pocas personas pueden conocer. A lo largo de este artículo queremos comentarle la historia de una mujer que afirmó haber vivido algo realmente asombroso, teniendo unas consecuencias todavía más increíbles...

LIVING

Edited by Hazel Parry hazel@red600news.com

She says she died and returned to defeat her cancer. Hazel Parry talks to Anita Moorjani about life, death and flashlights

THE WORLD IS full of people who would like to believe Anita Moorjani – and I'm one of them. After all, she claims to have the answer to a question that has dogged people through the ages: Is there life after death?

The answer, according to Moorjani, is an unequivocal "yes". She has been there, she says ... and back again.

One year ago, Moorjani was on her death bed. She was in the late stages of Hodgkin's lymphoma. Her whole body was swollen, her organs were failing and she was unable to breathe. She drifted into unconsciousness. She claims she then had an experience that would not only change her life but save it.

"I could feel my spirit actually leaving my body," she says. "I saw and heard a conversation between my husband and the doctors taking place outside my room, 40 feet (12 metres) down a hallway – a conversation I was able to repeat to my shocked husband later."

She claims to have crossed over into another dimension in which she glimpsed other lives. There was no bright light or tunnel. She says she was engulfed by a feeling of love and a great understanding of what life and death were all about, why we exist and why she had cancer.

"There are no words to describe the experience," Moorjani says. "I was in a place where I understood how much more there is than what we're able to conceive in our three-dimensional world. I realised what a gift life was."

While she was in this state, she says, she saw the "amazing possibilities" humans are capable of in physical life and understood that the body wasn't important, but was merely a reflection of a spiritual being.

What makes Moorjani's story particularly controversial is her claim that the experience cured her of the cancer.

"I was made to understand it was not my time," she says. "If I chose death, I wouldn't experience a lot of gifts my life had in store for me. I felt I could have gone on to death, but I also felt that my husband Danny and I had somehow chosen to come here and accomplish something together and that if I chose death, he would follow me in six months or a year."

"One of the things I wanted to know was that if I chose life, would I come back to this sick body? But I was made to understand that if I chose life, my body would heal very quickly."

"I was shown how illnesses start at an energetic level before they become physical," she says. "If I chose life, the cancer would be gone from my energy, my body would heal very quickly and I would see a difference not in months, but in days."

Moorjani chose life. That same day,

tests showed that her organs were functioning. The next day, she woke up and told her family she was going to be OK. Within days, she had been moved from intensive care, and was eating and listening to her iPod. Within a month, she was home. Test after test has shown no sign of cancer.

Now, a year on, Moorjani is bright-eyed – glowing even. After writing about her experience on a website about near-death experiences she has attracted some publicity. She now gives talks about her experience, has her own website and is considering writing a book.

When we meet, she hands me a name card bearing a website address, a wall of indecent colours and the words "Craving Heaven on Earth".

That is what it's all about, according to Moorjani: the "it" being why we exist. She says that once the near-death experience was to share her new-found knowledge of how it's up to us to create our own heaven on Earth, and how we have the power to do what she did.

"I was shown that everything going on in our lives was dependent on this energy around us, created by us. Nothing

was solid – we created our surroundings, our conditions depending on where this energy was."

Moorjani's doctors have different views about how and why she lived to tell the tale. Some say chemotherapy, even though it was administered at a very late stage – on her deathbed – is one. They also say that, with modern medicine, she should never have become so ill.

Here was a formidable cancer, with a 95 per cent success rate using chemotherapy. But Moorjani declined conventional treatment and instead consulted a naturopath.

Her cancer continued to progress until February morning, when she arrived at Hong Kong Sanatorium Hospital. She says the doctors were "amazed" that she hadn't sought treatment sooner and began chemotherapy in an attempt to save her life.

But Moorjani says it wasn't the natural medicine, the emergency treatment or the chemotherapy that cured her. Nor does she believe that her recovery had anything to do with God, describing herself as spiritual but not particularly religious. She insists that her body cured itself.

"I know it wasn't the chemo that cured

me and it wasn't the holistic medicine – it was me," she says. "I don't have the authority to speak for anyone else and I don't want people to stop treatment because of what happened to me, but nothing would make me happier than if someone could get something out of what happened to me – if someone else was able to live, if someone else was able to beat cancer."

But why her? Why not someone else? "I've been asked that a lot," says Moorjani. "I don't claim to be able to answer for anyone else. Speaking for myself, I know I made that choice out of love, not attachment. If for one moment I thought it would have benefited the people around me in some way if I went on to death, I would have probably chosen death."

"I COULD FEEL MY SPIRIT ACTUALLY LEAVING MY BODY. I HEARD A CONVERSATION OUTSIDE MY ROOM, 40 FEET DOWN A HALLWAY"

The whole experience, she says, has made her more spiritual and "completely fearless" of life.

"I see the world differently," she says. "Imagine you have lived your whole life in a huge, dark warehouse with one flashlight. Everything you see is by this one flashlight. Then one day, the lights come on and you see the whole warehouse. The vastness is overwhelming and there's more you can see. But when the lights go off again you know things are there. You start viewing things differently."

Before we part, she has a question. "Do you believe me?" she asks. I take a second to answer.

"I'd like to, I really would," I say. "But ..."

"I can't finish the sentence. She's not hurt by my obvious scepticism. 'My aim is to convert the sceptics, not preach to the choir,' she says with the serene smile of someone at ease with themselves and their life."

Leaving her, I feel as if I'm still stumbling around that big warehouse with that wretchedly inadequate flashlight.

A REMARKABLE RECOVERY, BUT WAS IT MIND OVER MATTER OR MODERN SCIENCE?

Anita Moorjani claims she cured herself of cancer after she underwent a near-death experience. Not surprisingly, doctors take a different view. But they concede that she appeared to be dying and that her recovery was remarkable.

Oncologist haematologist T.K. Chan was one of those who treated Moorjani last February when she was admitted to the Hong Kong Sanatorium Hospital and says she was close to death.

Chan and the other specialists tapped her chest to drain her lungs, which he says probably saved her life. They then began chemotherapy, a treatment she had refused for 3½ years.

"Hodgkin's disease is quite curable," says Chan. "It can have a dramatic response to chemotherapy. If it had been another cancer patient in her state, I wouldn't have expected her to survive. But with lymphoma, it's never too late."

"Whether the spiritual experience helped, I'm not in a position to say. Let's just say she did do a little better than expected as a patient who was clinically ill. It was a remarkable recovery. But I feel it was the chemotherapy, definitely, and the emergency draining of the chest."

"To be sceptical, if she recovered 10 years and then us and recovered, it could be due to her experience, but she did receive chemotherapy so it's not something absolute."

Brian Walker, Moorjani's GP, treated her with an "alternative support" cancer treatment which is said to work by helping the body's immune system to recognise cancer cells and deal with them naturally.

He says his treatment modified the cell structure to such an extent that the chemotherapy was able to work.

Hong Kong-born oncologist Peter Ko, who works at the University of Southern California

in Los Angeles, arranged to see Moorjani and all her medical notes on a visit last November.

"I find myself becoming more and more intrigued with her fantastic experience and especially the message she brought back," he says.

"I have difficulty with terms such as 'miraculous cure' and 'spontaneous remission', but her recovery was remarkable."

Ko says chemotherapy could not have caused such a dramatic

recovery and could have been highly toxic, considering the state of Moorjani's failing organs.

He says something either switched off the mutated genes or caused them to commit a sort of cell suicide.

"Either her mind or body was able to send a message to the cancer cells to turn off the mutated genes. Chemotherapy does work with Hodgkin's but I've never seen it work like this," Hazel Parry

SHE'S BACK

En el año 2006, concretamente un 2 de febrero, una mujer llamada Anita Moorjani fue ingresada en la unidad de cuidados intensivos de un hospital de su ciudad natal de Hong Kong. Ella estuvo en coma un período de tiempo, tenía sus ojos cerrados debido a la hinchazón y le costaba respirar con facilidad. También presentaba una gran inflamación en los ganglios, sus órganos no trabajaban correctamente y su piel mostraba algunas lesiones. Su delicado cuerpo estaba siendo devastado por el linfoma de Hodgkin.

Sin embargo, el siguiente 26 de marzo, poco más de mes y medio después, Anita se encontraba bailando y bebiendo champagne en una boda, recibiendo en julio un certificado de que su salud estaba perfectamente. Anita afirma que su rápida vuelta y recuperación de la muerte radica en un profundo cambio de mente y corazón. Entre todas las experiencias cercanas a la muerte, la suya es de las más famosas, y Anita sintió que, durante el coma, abandonó su cuerpo material.

Tanto en su libro “Morir para ser yo” como en la página web de la Fundación de Investigación ECM (Experiencias Cercanas a la Muerte), Anita afirmó haber podido escuchar una conversación entre su marido y un médico que tuvo lugar a unos 12 metros de su camilla, mientras que sentía estar libre de sufrimientos físicos y se encontraba en una “dimensión” distinta “envuelta en una sensación total de amor”. En el pequeño lapso de inconsciencia, se le brindaron dos opciones: volver a la vida o morir.

“Me di cuenta de que si elegía la vida, mi cuerpo podría sanar rápidamente. Vería la diferencia no en semanas ni meses, sino en algunos días”, dijo. Según su testimonio, eso fue justo lo que ocurrió al despertar. Se dio cuenta de que un gran miedo le había causado el horrible cáncer, y que el amor pudo curarla por completo. **“Cuando las personas se someten a operaciones médicas para tratar sus enfermedades, solo se intenta quitar la enfermedad del cuerpo, pero no de su energía, por eso a veces vuelve la enfermedad”,** explicó. “Si volvía, debía tener una energía muy saludable”.

El doctor Peter Ko, profesor clínico de la Universidad de California, escuchó sobre la rápida recuperación de Moorjani y quiso investigar al respecto.

“Su recuperación fue notablemente apreciable. Basado en mi propia experiencia y comentarios de mis compañeros, soy incapaz de atribuir su recuperación a la quimioterapia”. El doctor Jeffrey Long, es un oncólogo de Houma, Louisiana, y fundó la página donde Anita compartió su experiencia por primera vez. “Como médico que cura el cáncer, estoy fascinado por su asombrosa recuperación. Las ECM contienen notables testimonios, y espero poder compartir esta experiencia para que contribuya a futuras investigaciones”.

Anita ya había probado tratamientos alternativos hasta que, en un momento crítico, tuvo que someterse a la quimioterapia. “La enfermedad de Hodgkin es muy curable. Puede tener una respuesta dramática a la quimioterapia... Si la experiencia espiritual le ayudó, no estoy en condiciones de decirlo, pero fue una notable recuperación. Sin embargo, pienso que fue gracias a la quimioterapia, sin duda, y el drenaje de emergencia del pecho”. Agregó: “Tengo dificultades con términos como “cura milagrosa” y “remisión espontánea”, pero de un modo u otro, se recuperó muy bien”.

“Su cuerpo o mente fue capaz de enviar un mensaje a las células cancerosas para apagar a los genes mutados. La quimioterapia funciona bien con la enfermedad de Hodgkin, pero nunca la había visto actuar de esta manera”. Aunque no podemos saber con exactitud lo que realmente hizo que esta mujer volviera del coma y se recuperase de forma excelente, no cabe duda de que su testimonio ha supuesto un verdadero quebradero de cabeza para la comunidad médica, que sigue investigando al respecto.
